### 8.6 Write \& Graph I nequalities

Objective: To write and graph inequalities

## I nequalities

Symbol Name Closed Dot

| $=$ | Equal To | Closed |
| :---: | :---: | :---: |
| $<$ | Less Than | Open |
| $>$ | Greater Than | Open |
|  | Less Than <br> OR Equal To | Closed |
| - | Greater Than <br> OR Equal To | Closed |

## Graphing I nequalities

1) Isolate the variable
2) Determine if you have an open (not equal to) or closed (equal to) dot and place that dot on the number line
3) Determine which direction you need to shade to make the inequality true. A good point to check is $0!!$

## Examples

$$
\text { 1) } x=3 \quad \begin{array}{lllllll}
-3 & -2 & -1 & 0 & 1 & 2 & 3 \\
\hline \\
& 1 & 1 & 1 & 4 \\
\hline
\end{array}
$$

## One Solution

2) $x \cdot 3$

Infinite Solutions

## Graph the I inequalities

3) $x \cdot-2$

4) $x<2$

5) $x \cdot 3$

$$
\text { 4) } x>-1
$$

$$
\begin{array}{llllllll}
-3 & -2 & -1 & 0 & 1 & 2 & 3 & 4
\end{array}
$$

## Write I nequalities

1) Newport Whale Watching Tours reported seeing over 1250 common dolphins on Tuesday.

2) Dr. Bertch wants to even out class sizes at GMS. She has decided that each class should have no more than 40 students, but at least 25 students. Write 2 inequalities to represent this situation.

$$
x=\text { number of students }
$$

$x \cdot 40$ AND
0
0 $\quad 25$
